WAREHOUSE MANAGEMENT

Program Overview

Warehousing is accepted today as a critical component of logistics and supply chain operations.Warehouses have transformed from a mere storage place for goods to become complex operations that continue to add value within the supply chain and give competitive advantages to organisations.

The unit presents the fundamental warehouse management knowledge required of managers in logistics and the storage and distribution industry. It covers the role of the warehouse and how warehouse strategy fits into the entire logistics strategy. The key elements are operational functioning of a warehouse, its technology and effective control.

The unit aims to deliver the understanding and competence of those key elements of warehouse management practice that are fundamental to both commercial and non-commercial organisations.
